

# CryoStore™

## Freezing Bags

The OriGen CryoStore™ bag is indicated for cryogenically freezing blood components. It has the traceability, durability, and safety that you need.

### Traceability - Heat Welded Lots

A permanent lot number is heat welded into the tail of each bag for easy traceability.

### Aliquots - Matched Bag and Tube Printing

Each bag has a donor tube with printed segments of approximately 100uL and a matched number on the bag. This can aid in keeping aliquot samples with the bag.

### Durability - Better Material, Proven Performance

The hermetically sealed spike ports and film used in every CryoStore™ bag are made from a more rugged EVA than that used in other bags. The proof of durability is in our customer's success.

### Safety - Needle Free Injection Port

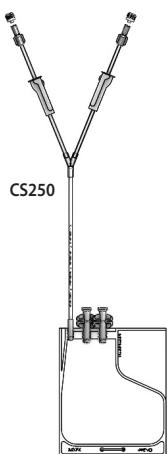

Standard tubing sets with an injection site now have luer-actuated needle-free injection ports. These swabable ports maintain sterility of the sample through numerous actuations (white paper available), and can eliminate the possibility of needle sticks.
